Description

As a Full Stack Developer at TurnCare, you will develop information products that will be used internally to drive critical business decisions and by TurnCare's customers to improve patient outcomes. You will be responsible for designing, implementing, and maintaining dashboards and reports that are the synthesis of data from multiple sources, such as proprietary medical devices, inventory tracking, accounting data, sales forecasts, and more.

Responsibilities

Front-End Development & UI/UX

- Design user-friendly, data-rich interfaces and interactive experiences.
- Test applications before release to ensure functionality and compatibility across different browsers and screen sizes.

Back-End & Data Engineering

- Integrate multiple data sources to provide efficient access to information.
- Coordinate with backend teams to streamline data requirements and improve data availability.

Project Management & DevOps

- Independently manage projects from development through production.
- Contribute to documentation covering project requirements, application behavior, and testing procedures.

Cross-Functional Collaboration & Client Integration

- Collaborate with operational and organizational teams to develop new reports and improve existing ones.
- Work with customer IT teams to integrate and configure products within their systems.

Qualifications

- Bachelor's degree or higher in Software Engineering, Data Analysis, or a related field. Equivalent experience may be considered.
- At least 2 years of experience in data science or full-stack software development.
- Experience developing data-intensive analytical reports.
- Experience deploying and testing web services.
- Strong frontend development skills, including HTML, CSS, JavaScript, and Vue.js.
- Familiarity with SQL, preferably MySQL.
- Ability to communicate effectively with technical and non-technical teams.

Preferred & Important Skills

- Experience with EMR systems and integrations a big plus

- Familiarity with AWS ecosystem, especially deployment and configuration
- Familiarity with technologies underlying SSO implementations
- Data visualization/design
- Performance tuning
