Description

We are looking for a Back-end Developer to develop and maintain enterprise backend applications, APIs, and system integrations. You will implement business logic and contribute to secure, reliable, and scalable services in collaboration with business and technical stakeholders.

Responsibilities

- Design, develop, test, and maintain backend services using .NET, Python, Node.js, or equivalent technologies.
- Translate business requirements into application functionality, APIs, and integrations.
- Design and manage relational and/or NoSQL databases.
- Implement authentication, encryption, logging, monitoring, and caching.
- Develop automated unit tests, participate in code reviews, and troubleshoot defects.
- Maintain technical documentation and communicate implementation progress, dependencies, and issues.

Requirements

- At least 5 years of experience developing and maintaining backend applications, including APIs, integrations, and service-based architectures.
- At least 5 years of experience working independently and within multidisciplinary teams across business functions, organizations, or locations.
- At least 3 years of experience using Jira in collaborative software delivery environments.
- Strong experience with one or more enterprise backend technologies, such as .NET, Python, or Node.js.
- Experience with relational and/or NoSQL databases, server-side security, reliability, and scalability.
- Experience with automated unit testing and software quality practices.
- Experience using AI-assisted development tools, with critical review of generated outputs.
- Bachelor’s degree or higher in Computer Science, Software Engineering, IT, or a related field.
- At least one relevant professional certification, such as AZ-204, AWS Certified Developer – Associate, Oracle Certified Professional Java SE Developer, CKAD, or equivalent.
