Description

We are seeking a Software Engineer to build and maintain business applications using C#, .NET, React, and cloud services. This role spans backend development, frontend interfaces, database design, third-party integrations, and production support.

You will work with business stakeholders and engineering teammates to translate requirements into reliable software, guide technical decisions, and improve development and release practices.

Responsibilities

- Design, develop, and maintain applications using C#, ASP.NET Core, Web API, React, and TypeScript.
- Build REST APIs and integrate applications with external business systems through APIs, webhooks, and event-driven workflows.
- Design database schemas, write SQL queries and stored procedures, and optimize application performance.
- Build authentication, role-based authorization, and audit logging into applications.
- Deploy and support applications in cloud environments using automated CI/CD pipelines.
- Maintain and modernize existing .NET Framework and ASP.NET MVC applications.
- Participate in requirements gathering, architecture discussions, code reviews, testing, and production troubleshooting.

Required Qualifications

- 7+ years of professional software development experience, including substantial experience with C# and .NET.
- Strong experience developing backend services with ASP.NET Core and Web API.
- Experience building frontend applications using React, TypeScript, JavaScript, HTML, and CSS.
- Proficiency with relational databases such as SQL Server or PostgreSQL, including schema design and query optimization.
- Experience integrating third-party APIs and handling asynchronous workflows.
- Experience deploying and supporting applications in Azure or AWS.
- Working knowledge of Git, CI/CD pipelines, and automated testing.
- Ability to own features from requirements through deployment and production support.
- trong communication, troubleshooting, and collaboration skills.

Preferred Qualifications

- Experience with Next.js, Tailwind CSS, and legacy ASP.NET MVC applications.
- Familiarity with Entity Framework, LINQ, Redis, and caching strategies.
- Experience with Azure App Services, Azure SQL, Azure Functions, or

comparable AWS services.
- Familiarity with microservices, Clean Architecture, domain-driven design, and multi-tenant SaaS applications.
- xperience conducting code reviews and mentoring developers.
- Bachelor’s degree in Computer Science or a related field, or equivalent practical experience.
