Senior Full-Stack Developer

Description

Architect, build, and deploy high-performance internal web applications and interactive dashboards.
Develop intuitive frontend interfaces using **React** and **TypeScript** (including charting/visualization libraries like Apache ECharts).
Build resilient backend services and REST APIs with **Python** and **FastAPI**.
Deploy, scale, and maintain applications directly inside **Databricks Apps**, integrating deeply with **Databricks SQL** and cloud data ecosystems.
Collaborate directly with Product Owners and business stakeholders to translate complex requirements into live, production tools.

Key Requirements

- 5+ *years* of hands-on full-stack development experience.
- Production Databricks Apps: Hands-on experience deploying, monitoring, and supporting live applications within Databricks Apps (this is a key, day-one requirement for this team).
- Frontend: Strong proficiency in React and TypeScript building responsive, data-driven user interfaces.
- Backend: Solid expertise in Python and FastAPI building clean, scalable APIs.
- Data Layer: Strong SQL skills and hands-on familiarity querying data inside the Databricks Lakehouse ecosystem.
