Senior Full Stack Developer

Description
We’re looking for a senior-level engineer to shape and lead the architecture of AI-driven platforms. This role involves designing scalable software systems, developing agentic solutions, and guiding technical decisions while contributing to the growth and direction of the engineering team.

Responsibilities

- Design and develop microservices, gRPC, and event-driven systems using RabbitMQ and Kafka.
- Build production-ready RAG pipelines and LLM agent workflows with LangGraph.
- Develop applications using React, Next.js, Node.js, Nest.js, and Python.
- Manage AWS infrastructure and CI/CD pipelines.
- Mentor and guide the engineering team.
- Shape software architecture and technical solutions.

Qualifications

- 5+ years of full-stack development experience.
- Experience in tech lead or staff-level engineering roles.
- 2+ years of experience building LLM-powered or agentic systems.
- Production experience with microservices.
- Strong knowledge of SQL/NoSQL databases and vector databases.
- Strong written English communication skills for working with a US-based team.
