Description

We are looking for an experienced Senior Frontend Developer to develop, maintain, and optimize modern web applications using React. The ideal candidate should have strong TypeScript knowledge, experience with RxJS, and a solid understanding of frontend architecture and software design principles.

This role involves building new features, improving existing functionality, optimizing application performance, and designing effective technical solutions. The position requires the ability to work independently, analyze technical requirements, and deliver high-quality frontend solutions.

Responsibilities

- Develop new website features and functionality using React.
- Modify and improve existing application functionality.
- Optimize application speed and overall performance.
- Design and implement technical solutions.
- Break down technical specifications into smaller subtasks.
- Independently manage and complete assigned development tasks.
- Participate in code reviews.
- Maintain code quality and follow software design principles.
- Work with RxJS and modern frontend technologies.

Qualifications

- Professional experience working with TypeScript.
- Understanding and practical application of SOLID principles.
- Theoretical or practical knowledge of Functional Reactive Programming (FRP).
- Familiarity with HTTP(S) and WebSocket (WS/S) protocols.
- Experience with RxJS.
- Ability to break down technical specifications and complete tasks independently.
- Understanding of native UX/UI components and their behavior.
- Experience in conducting code reviews.
