Description

Whether you’re in the heart of Vilnius or anywhere else in Lithuania, you’ll join forces with dedicated professionals in the IT sector, contributing to the development, enhancement, and modernisation of information systems and registries. You’ll help create intuitive, interactive, and accessible user interfaces, ensuring seamless integration with backend services and delivering high-quality solutions that meet users’ needs.

Responsibilities

- Developing and enhancing interactive user interfaces for information systems and registries.
- Integrating front-end applications with backend services and information systems using APIs or equivalent data exchange mechanisms.
- Implementing user interfaces in line with UX principles and accessibility standards.
- Participating in the analysis, design, development, and implementation of information system solutions.
- Contributing to the modernisation and continuous improvement of existing systems.
- Collaborating with other project team members to ensure the successful delivery and deployment of solutions.

Qualifications

- At least 3 years of front-end development experience within the last 5 years, gained through working on information systems or registries.
- Practical experience with modern front-end technologies and frameworks such as React, Angular, Vue, or similar. Specific technologies may vary depending on the project requirements.
- Experience in developing interactive user interfaces for information systems.
- Experience integrating front-end applications with backend services using APIs or equivalent data exchange mechanisms.
- Knowledge and practical application of UX and accessibility principles when developing user interfaces.
- Experience in information system development, enhancement, or modernisation projects within the last 3 years.
- Participation in at least one completed information system project within the last 3 years, covering the full project lifecycle – from analysis and design through to solution deployment or the start of operations.
